

# Web project update

# Web project update

- Entire new UEA website under development
- Both “front facing” website and portal
- Hoping to be online by Feb 2019 (!)

# New website features

- Traditional “tree-like” web structure outdated
- New website focused on pages being easily found via searches (internal and Google etc.)
- Emphasis on images, and reducing amount of text
- Anybody will be able to create “news stories”, and web managers will add these to school/uni wide pages (?)

# SCI web committee

- Link between ARM/developers and academics
- Chaired by Alastair Grant
- Aims to ensure that academic side of things not lost among the marketing!

# SCHOOL OF PHARMACY

Home > Faculty of Science > School of Pharmacy

The School of Pharmacy is known for its pioneering research, ranking first for research output among all UK pharmacy schools in the Research Excellence Framework 2014.

The impact of our work can be seen across the world, as with our groundbreaking research into cancer treatment. By creating the world's first artificial intelligence environment, we've been able to discover the causes of cancer and help identify drug treatments which could save a person's life without the need for surgery. The impact of this work is truly astonishing, potentially saving the lives of 20 million people around the world.

Our research informs our teaching, and as a result we are one of the most consistently high-ranked pharmacy schools in the National Student Survey. We are ranked in the top 10 for Pharmacy and Pharmacy in the Times and Sunday Times Good University Guide 2018, and 9% of our students go on to graduate-level jobs or further study within six months of graduation, according to the Guardian University Guide 2017.

In 2013 the School of Pharmacy proudly achieved the Bronze Athena SWAN award.

- Molecular and Tissue Pharmacology
- Chemical Biology and Medicinal Chemistry

The School of Pharmacy is known for its pioneering research, ranking first for research output among all UK pharmacy schools in the Research Excellence Framework 2014.

The impact of our work can be seen across the world, as with our groundbreaking research into cataract treatment. By creating the world's first artificial lens environment, we've been able to examine the causes of cataracts and help develop drug treatments which could save a person's eyesight without the need for surgery. The impact of this work is truly astonishing, potentially saving the sight of 20 million people around the world.

Our research informs our teaching, and as a result we are one of the most consistently high-ranked pharmacy schools in the National Student Survey. We are ranked in the top 10 for Pharmacology and Pharmacy in The Times and Sunday Times Good University Guide 2018, and 99% of our students go on to graduate-level jobs or further study within six months of graduation, according to the Guardian University Guide 2017.

# Progress so far

- Audited entire current website and marked pages which need changing/removing
- Identified key areas to highlight on BIO homepage
- Undergraduate course pages done (?)
- PGR pages done/in progress (?)
- Research homepages in progress

# Next steps

- New text and images required for various pages
  - Research pages
  - Research themes pages
  - Athena Swan pages
  - Enterprise/engagement
  - Various others
- I will be in touch soon!

# Issues

- People pages (PURE) not part of current web project
- We don't know who is going to manage/update new website at university/school levels
- We don't have nearly enough images
- Large amount of content to be re-written
